PROFESSIONAL SUMMARY

Tech Lead with 7+ years of experience delivering AI-driven, customer-facing, and cloud-native enterprise solutions. Proven ability to lead end-to-end technical engagements, interface directly with business stakeholders, and deploy production-ready AI/ML, automation, and backend systems at scale. Strong background in Python, React, APIs, microservices, and cloud platforms (AWS/GCP). Experienced in building real-time automation systems, designing scalable architectures, debugging live issues, and mentoring engineering teams. Entrepreneurial mindset with a track record of working in ambiguous environments and driving customer success from discovery through deployment.

SKILLS

Technical Skills:

Python, Node.js, React, TypeScript, REST APIs, Webhooks, CI/CD (GitHub Actions, GitLab), Docker, Kubernetes, Serverless, Lambda, Message Queues, Microservices, SQL/NoSQL, Redis, Kafka, Streaming Pipelines, AI/ML (LLMs, NLP, MLOps), FastAPI, Django, Automation Frameworks, Observability (Grafana, CloudWatch), Production Debugging.

Cloud & DevOps:

AWS (Lambda, ECS, Fargate, S3, API Gateway, DynamoDB, IAM), GCP, Terraform, Infrastructure-as-Code, Deployment Pipelines, Monitoring & Alerting, Cloud Security.

Customer & Delivery Experience:

Technical Discovery, Scoping, Demo-driven Selling, Stakeholder Alignment, Forward Deployment, Requirements Gathering, Customer Solutioning, Project Leadership, Cross-functional Collaboration.

Soft Skills:

Customer Empathy, Communication, Rapid Prototyping, High Ownership, Mentoring, Problem-Solving, Low-Ego Collaboration, Context Switching, High Attention to Detail.

PROFESSIONAL EXPERIENCE

Southwest Airlines (Qentelli) TX – Tech Lead

June 2023 – Present

- Designed and led development of an **end-to-end AI automation platform** using AWS Bedrock, Amazon Q Business, and multi-agent orchestration to auto-generate code, create branches, and raise GitLab MRs from Jira tickets.
- Built a **multi-agent ecosystem** (Jira, GitLab, Xray) through custom MCP servers enabling structured tool-calling and seamless cross-system automation.
- Implemented a fully automated workflow that retrieves Jira summaries, generates feature branches, writes boilerplate code, commits changes, and opens merge requests with minimal human involvement.
- Created a scalable **RAG pipeline** using embeddings and vector DBs to ingest and retrieve thousands of Confluence documents, enabling Bedrock models to provide accurate engineering answers.
- Integrated Bedrock LLMs (Claude, Llama, Titan) with reasoning agents to improve code generation, ticket comprehension, and automated documentation generation.
- Delivered the platform end-to-end: technical discovery, requirements gathering, architecture, development, CI/CD, AWS deployment, monitoring, and iterative optimization.
- Ensured enterprise reliability through rate limiting, error handling, observability, fallback logic, and structured agent workflows.
- Presented demos and technical documentation to leadership, showcasing significant reductions in engineering cycle time and manual workload.
- Led customer-facing technical engagements including discovery, solution design, integration planning, and production rollout of AI and automation solutions.
- Acted as the primary technical POC for cross-functional teams, managing stakeholders, resolving blockers, and driving delivery timelines.
- Architected and deployed production-ready backend services and automation workflows using Python, React, FastAPI, Docker, Terraform, and AWS cloud services.

- Developed scalable API integrations enabling real-time data exchange across enterprise systems.
- Owned full SDLC including prototyping, development, CI/CD pipelines, cloud deployment, monitoring, and production support.
- Mentored junior engineers and established engineering best practices around design, observability, reliability, and automation.

Smile Direct Club (Qentelli) – Sr. Software Engineer

Oct 2020 – May 2023

- Led successful migration from on-prem Teradata to **AWS Redshift** ensuring zero data loss and optimized performance.
- Designed and implemented scalable **data pipelines** in Python and Java for both batch and real-time workloads.
- Architected and deployed **Confluent Kafka on AWS** for real-time streaming and event-driven data processing.
- Automated **AWS Glue ETL** workflows to transform and store data in S3 (Parquet), improving reliability and reducing manual operations.
- Designed and optimized data warehouses in **Redshift and BigQuery**, improving query performance and cost efficiency.
- Built a reusable internal **data generation framework** (JSON, CSV, XML) packaged as a Python library for cross-team use.
- Integrated AWS services including Lambda, DynamoDB, OpenSearch, Step Functions, SQS, SNS, and S3 using boto3.
- Built data quality monitoring using **SonarQube and DataDog**, reducing pipeline failures/downtime by 30%.
- Designed CI/CD workflows for data pipelines, achieving **95% test coverage** for ETL processes with automated tests.
- Added unit + integration testing to ETL pipelines, reducing data errors by 25% and improving schema consistency.
- Converted manual infrastructure deployments to **Terraform and YAML IaC**, reducing environment setup time by 50%.
- Enhanced real-time observability using CloudWatch, OpenSearch, and SNS, reducing false alerts by 20%.
- Reduced cloud infrastructure cost by **\$100K annually** through workflow automation and test/reporting optimizations.

SS&C Technologies – Software Engineer

May 2019 – April 2020

- Developed backend services using **Django, Flask, React, and Spring Boot** for claims adjudication and health insurance workflows.
- Implemented secure authentication and data protection using **OAuth2, SSL, JWT, and encryption**.
- Built automated data backup pipelines to **AWS S3**, ensuring compliant storage of claims data.
- Parsed employer/job details using **BeautifulSoup**, improving data accuracy and claims validation speed.
- Used **NLTK** for tokenization and text extraction to improve automated claims adjudication processes.
- Built containerized applications using **Docker**, enabling consistent performance testing across environments.
- Built CI/CD workflows using **Jenkins** to automate builds, tests, and deployments for claims processing systems.
- Implemented automated functional testing using **Pytest and Selenium**, ensuring high reliability across QA and production environments.
- Reduced production defects by enforcing automated test coverage and environment parity.

EDUCATION

Vardhaman College of Engineering

Bachelor of Technology in Computer Science

Graduation: 2019

Government Polytechnic

Diploma in Computer Science

Graduation: 2016

CERTIFICATIONS

AWS Certified Solutions Architect – Associate [AWS Credential Verification](#)

AWS Certified Cloud Practitioner [AWS Credential Verification](#)

Machine Learning and Artificial Intelligence [AppliedAI](#)

Information Security-IV NPTEL

Mobile Application Development NPTEL
